

Mikail Arslan

Senior Consultant - Frontend and Fullstack Developer

Oslo, Norway
M +47 45 46 30 68
E mikailarz@outlook.com
Born: 1994

Profile

Senior consultant and versatile frontend/fullstack developer with a Master's degree in Computer Science from NTNU. Mikail has broad experience from public and private sector customers, with strong focus on user-friendly digital services, accessible interfaces, content platforms and customer-facing web applications. He combines a good eye for visual design and user interaction with the ability to understand complex domains and deliver robust technical solutions in cross-functional teams.

Core competence

Frontend	React, Next.js, Angular, TypeScript, JavaScript, HTML, CSS/SCSS, responsive design, universal design/accessibility, SEO
Backend/tools	Kotlin, Spring Boot, REST APIs, SQL, PostgreSQL, Docker, GitHub, GitLab, CI/CD, Cypress, Jest, Jira, Confluence
Methods	Scrum, Kanban, DevOps collaboration, cross-functional product teams, design systems, content management
Languages	Norwegian fluent, English fluent, Turkish native

Education

2013 – 2018 **Master's degree in Computer Science**, *Norwegian University of Science and Technology (NTNU)*, Trondheim
Specialization: Interaction Design and Game Technology

Certifications

- 2018 Microsoft 70-480: Programming in HTML5 with JavaScript and CSS3
- 2018 ISTQB Certified Tester Foundation Level (CTFL)
- 2019 UXQB Certified Professional for Usability and User Experience - Foundation (CPUX-F)

Employment

- 04/2022 – **Senior Consultant**, *Webstep AS*, Oslo
09/2026 Consultant assignments and internal product development for customers in the public and private sector.
- 09/2020 – **Frontend Developer**, *Fremtind Forsikring AS*, Oslo
03/2022 Frontend development for customer-facing insurance solutions.
- 08/2018 – **Frontend Developer**, *Sopra Steria*, Oslo
08/2020 Consultant assignments for customers such as Aker BP, Avinor, Mimi and Oslo Pensjonsforsikring.

2015 – 2018 **Frontend Developer**, *Ace Education / Intoit*, Trondheim
Development of digital learning and micro-learning services.

Selected projects

Webstep

- 03/2026 – **Fullstack Developer**, *Webstep Pulsen - internal KPI dashboard*, Webstep
09/2026 Developed a real-time KPI dashboard for large-screen display in Webstep's offices. The solution visualizes key organizational indicators, highlights deviations and goals, and includes an administration interface where users can maintain KPI values directly.
- Owned the full technical vertical from user interface to backend APIs and data model.
 - Built a responsive and visually engaging interface for large-screen use.
 - Implemented business logic and REST endpoints for updating and presenting KPI data.

Statnett

- 01/2024 – **Frontend Developer**, *Automated balancing (AUTOBAL)*, Statnett
09/2025 Worked in a team delivering applications and tools for operators at the national control centre. The project supported the balancing of electricity production and consumption and was part of Statnett's work on digitalizing and automating system operations.
- Developed frontend solutions for operational tools used in a complex energy domain.
 - Contributed to applications supporting more automated and reliable power system operations.
 - Participated in further development of Statnett's design system and shared frontend components.

NAV

- 06/2022 – **Frontend Developer**, *Product page for unemployment benefits*, NAV
11/2023 Contributed to the new product page for unemployment benefits on nav.no. The project replaced older content and solutions with a clearer, more maintainable and user-friendly platform for both end users and case workers.
- Developed and maintained the new product page and related pages for historical content versions.
 - Worked closely with content designers to structure content in Sanity for Norwegian and English pages.
 - Improved technical quality through accessibility, semantic HTML and SEO work.
 - Participated in frontend forums and contributed with input related to NAV's design system, Aksel.

Fremtind Forsikring

- 09/2020 – **Lead Frontend Developer**, *Personal insurance solutions*, Fremtind Forsikring
03/2022 Worked on customer-facing insurance solutions for private customers, including purchase flows, digital acceptance of offers and health assessment forms. The work supported insurance products distributed through SpareBank 1 and DNB.
- Modernized applications using Fremtind's design system, Jøkul, to ensure a consistent customer experience.
 - Developed self-service functionality for cancellation of insurance policies, reducing manual processing.
 - Contributed to new product functionality, shared frontend utilities and improvements to developer workflow.
 - Participated in design system discussions and documentation work.

Oslo Pensjonsforsikring

10/2019 – **Frontend Developer**, *Public website and internal customer system*, Oslo Pensjonsforsikring

Developed and maintained the user interface for Oslo Pensjonsforsikring's official website. Also contributed to an internal system used to collect and process customer relationship information.

- Built and maintained website interfaces used by customers and editors.
- Created content templates in Optimizely CMS/EPiServer and .NET for editorial publishing.
- Contributed to development of a new internal tool for customer information processing.

Mestergruppen

08/2019 – **Frontend Developer**, *Simplified offer process*, Mestergruppen

09/2019 Contributed to a frontend application intended to simplify the process of preparing offers for customers.

- Developed user interface functionality and participated in planning and estimation.
- Helped finalize the solution and document the product for handover.

Avinor

06/2019 – **Lead Frontend Developer**, *Avinor passenger flow prototype*, Avinor

07/2019 Led frontend development of a prototype installed on a large touch screen at Bodø Airport. The prototype helped passengers discover activities while waiting for departure.

- Implemented the delivered design as an interactive large-screen experience.
- Integrated a dynamic map and analytics to provide insight into user behaviour.
- Documented the work thoroughly in the project report.

Aker BP

01/2019 – **Frontend Developer**, *Noise Boys*, Aker BP

06/2019 Developed a mobile-oriented prototype for registering noise levels and other values on the Norwegian continental shelf. The data was intended for analysis, planning and organization of work on oil installations.

- Worked closely with HSE specialists and users on offshore installations.
- Iterated on ideas through feedback from workers in the field.
- Took significant responsibility as the only frontend developer and one of few development resources in the project.

Mimiro

09/2018 – **Frontend Developer**, *Digital agriculture solutions*, Mimiro

12/2018 Contributed to frontend applications for digitalizing agricultural tasks, including solutions for analysing milk quality for individual animals.

- Developed and maintained responsive frontend applications.
- Contributed to a component library used as a shared communication tool between developers and designers.
- Gained experience with GraphQL, Relay, Cypress and Jest in a product team setting.

Intoit

06/2017 – **Frontend Developer**, *Crowdsourced e-learning platform*, Intoit

08/2018 Worked as one of the leading frontend developers on Intoit.io, a crowdsourced EdTech platform using gamification.

- Helped launch the pilot version of the service together with the product team.
- Collaborated closely with developers and UX designers through weekly product and solution discussions.

Ace Education

09/2015 – **Frontend Developer**, *Micro-learning mobile application*, Ace Education

06/2017 Contributed to the development of a micro-learning application designed to help students prepare for exams.

- Developed a shared React Native application for iOS and Android.
- Previously contributed to separate native applications in Android Studio and Xcode.
- Helped build a CMS for managing educational content in the application.

NTNU - AppLab

09/2014 – **Frontend Developer**, *PocketExam*, NTNU AppLab

08/2015 Developed a native Android and iOS exam preparation app together with two fellow students during the NTNU AppLab bootcamp.

- Built native mobile functionality for both Android and iOS.
- The app was selected as the second-best app at the end of the AppLab programme and was well received by students at NTNU.
